

# Environmental Policy

## Statement of Intent

Touchprint strives to be a sustainable business which is committed to the protection of the environment and pollution prevention. We will comply with all legislative requirements and are committed to continuous improvements to enable smarter use of resources and improved energy efficient systems and the reduction of waste and carbon emissions related to our business.

## Our Commitments and Guiding Principles

- Touchprint will achieve our goals by applying the following principles in all areas of our operations - reduce, reuse, recycle and repair.
- We will actively engage with staff, contractors, clients, and suppliers to achieve our sustainability goals and positively influence environmental outcomes within our supply chain.
- We will demonstrate leadership with ongoing education and training for our staff to enable continual improvement of our environmental performance in the workplace and the community.
- We will actively seek out practical opportunities to minimise the wastage of raw materials, energy, and water.
- If more environmentally friendly products are available, we will actively offer these alternatives to our customers so they may make an informed decision.
- We will work to increase recycling for any wastage created by us thereby minimising waste to landfill.
- We are committed to continuing our status as a carbon neutral business and maintaining our Toitū carbonzero certified organisation status.
- We will regularly review and measure our environmental objectives and targets and report on our performance.
- We are committed to having an external review of our EMS to confirm our environmental objectives follow best practice. We will do this by maintaining our Toitū Enviromark® certified organisation status.

This policy applies to all Touchprint employees and all contractors working on the Touchprint site.
